NIOSH Work/Rest Schedule:

- Based on air temperature, with adjustments for direct sunlight and humidity.

Assumes workers are:

- Physically fit
- Well-rested
- Fully hydrated
- Under age 40
- Environment has 30% humidity and perceptible air movement

Temperature Adjustments for this Work/Rest Schedule are based on:

Environmental conditions:

- Full sun (no clouds): Add 13 °F
- Partly cloudy/overcast: Add 7 °F
- No shadows visible, in the shade, or at night: No adjustment.

-AND -

Humidity:

- 40% humidity: Add 3 °F
- 50% humidity: Add 6 °F
- 60% humidity or more: Add 9 °F

Work/Rest Schedules

Examples of Work at Different Intensity Levels

Light work:

- Operating equipment
- Inspection work
- Walking on flat, level ground
- Using light hand tools (wrench, pliers, etc.). However, this may be moderate work depending on the task
- Travel by conveyance

Work/Rest Schedules

Examples of Work at Different Intensity Levels

Moderate work:

- Jack-leg drilling
- Installing ground support
- Loading explosives
- Carrying equipment/supplies weighing 20-40 pounds
- Using hand tools (shovel, fin-hoe, scaling bar) for short periods

Work/Rest Schedules

Examples of Work at Different Intensity Levels

Heavy work:

- Climbing
- Carrying equipment/supplies weighing 40 pounds or more
- Installing utilities
- Using hand tools (shovel, fin-hoe, scaling bar) for extended periods

Knowledge Check

Work/Rest schedules are largely dependent on what factors?

- a. Metabolic work rate and temperature,
- b. Humidity and temperature
- c. Temperature, clothing and humidity
- d. Clothing, humidity and temperature

a. Metabolic work rate and temperature

Acclimatization

- Nearly 3 out of 4 heat illness fatalities happen during the first week of working in hot environments.
- New and returning workers need to acclimatize.
- Follow the 20% rule:
 - Day 1, only work 20% of a shift at full intensity.
 - Increase time working at full intensity by 20% a day.
